TCT Hand Tile Cutter

These heavy-duty large blade cutters/nippers are fitted with tungsten carbide tipped jaws to provide a long working life. The pliers feature soft feel handles for extra grip and comfort and a spring return mechanism. This makes the pliers easy to use while carrying out repetitive actions, such as cutting or nibbling tiles to shape around pipes, switches, sills and other fittings. Use on ceramic tiles only.

Tungsten Carbide Tipped

Soft-Grip Handle

Ceramic Tile Markers

Suitable for marking ceramic surfaces prior to cutting and shaping. May also be used on glass, plastic and metal surfaces. The line can be easily rubbed off after use. The markers' easy-peel action means that no sharpening is required. However, these markers can be sharpened with a knife if a fine edge is required.

WARNING: Always test the marker first on a spare tile as permanent marking may occur on certain natural or unglazed materials i.e. stone and porcelain.

Black and Red

Hand DIY Tile Cutter TCT Tipped

An easy to use tile scribe fitted with a tungsten carbide tipped blade that will provide a long working life. The scribe is suitable for scoring ceramic wall and floor tiles prior to snapping to size and features a contoured handle that provides a firm grip and helps maintain the correct blade angle when scribing.

Profile Gauge

A profile gauge provides a quick and easy way to accurately cut around unevenly shaped surfaces that would otherwise prove difficult to tackle, helping to prevent costly mistakes. When pressed against a surface, the profile gauge will produce a copy of the shape of that surface. This shape can then be transferred to provide a drawn cutting line onto the material being fitted. The gauge is ideal for use when tiling, laying carpets, vinyl or laminate flooring and wallpapering applications. It features a metric and imperial scale, and is magnetic for hands-free working on steel surfaces.

Length: 250mm
