POST HOLE AUGER

A post hole auger provides an easy non-mechanical means of creating 150mm (6in) diameter holes when erecting fencing posts. When rotated in a clockwise direction, the 150mm diameter thread bores a hole into the soil or clay, to a hole depth to suit the length of the post to be secured.

The overall height of the tool is 1,075mm and the thread length is 350mm.

POST HOLE DIGGER

Sometimes called a 'shovel holer'. The steel oval mouth shovel blades are hinged in opposition for easy use and soil removal. A closure stop on the shafts maintains the blades in parallel alignment when driving the shovel into the ground, creating a neat post hole while minimising the need to backfill.
