

## CIRCULAR SAW BLADES

Laser cut  
expansion slots

7mm Tungsten  
Carbide Tipped  
teeth

The blades in this range fit most popular makes of power machines. They are of a professional quality and the 7mm Tungsten Carbide tipped teeth ensure a long working life and accuracy of cut. Each blade has laser cut expansion slots to improve their performance by reducing heat build up, and many sizes are available with different tooth counts that allow the user to select the correct blade for the job in hand.

**Please Note:**

Blank entries in the bush column indicate that no bush is supplied.

The direction of rotation is clearly marked on all blades.

It is advisable to ensure that the centre hole size (bore) is compatible with the machine being used. In cases where bushes are supplied, they allow a limited reduction in bore size.

## CORDLESS BLADES

Specially designed for use with hand-held cordless saws, this range includes blades for fast cutting and fine finishing on all types of timber and man-made boards. Each blade has laser cut expansion slots to improve their performance by reducing heat build up. There is also a 173mm blade with no expansion slots for use in specialist ferrous metal cutting saws.
