

MORTAR RAKER STARTER KIT

The Faithfull mortar raking kit is a specialist tool for use with 115mm (4 $\frac{1}{2}$ in) or 125mm (5in) diameter angle grinders, for two main tasks:

1. Removing mortar joints in brickwork.
2. Cutting channels into masonry materials for cable and pipe runs, and housings for electrical fittings and controls.

Compared with diamond wheels or blades which operate in horizontal planes only, the cutter provides two advantages:

- a) Targeted cutting in any direction including curves and radiuses, whereas the end taper of bladed cuts would extend past the target area.
- b) Immediate stock removal

The fully adjustable sole plate allows a choice in the depth of cut, and the tubular handle attaches to a vacuum cleaner for dust extraction.

The kit comes complete with a unique reversible solid tungsten carbide cutter that is simple to replace, and is also available separately.

THE KIT CONTAINS THE FOLLOWING ITEMS:

1. Adjustable depth sole plate with a tubular handle for use on angle grinders with a 115mm (4 $\frac{1}{2}$ in) or 125mm (5in) diameter.
2. M14 thread grinder collet.
3. Reversible 8 or 10mm solid tungsten carbide cutter.
4. Two reduction rings to fit angle grinders with a collar diameter of 50mm (1.97in), 43mm (1.69in) or 41mm (1.61in).
5. Hexagon key.

MORTAR & MASONRY ROUTER

This robust multi-purpose and versatile 10mm ($\frac{3}{8}$ in) diameter tungsten carbide tipped routing tool is suitable for use with most mains operated power drills. The cutting blade is 23mm ($\frac{7}{8}$ in) long.

It is ideal for the quick and easy removal of old and soft mortar from between brick courses prior to repointing.

The router can also be used for creating channels or grooves in plaster or cement skimmed walls when runs of electrical cable or pipework need to be recessed.

ADJUSTABLE SUPPORT PROPS

These props are designed for use as an extra pair of hands when supporting ceiling boards and sheet materials during overhead fixing.

They are adjustable to working heights ranging from 1.6M to 2.9M. The feet at both ends swivel to accommodate sloping or uneven surfaces and to improve grip.

Sold as a pair and supplied in a sturdy carry bag.

PLEASE NOTE that these props are for lightweight temporary support only and MUST NOT be confused with heavyweight equivalents which are designed to support heavy loads over extended periods.

NEVER exceed the maximum Safe Working Load of 60Kg (vertical), reducing to a maximum of 20Kg (at 45°)
