

PLUG CUTTERS

Used in combination with screwsinks to prepare perfectly sized plugs to fill counterbored holes. For best performance the power drill should be stand-mounted. For a perfect grain match, use an off cut from the timber being plugged.

To ensure an accurate fit, the corresponding screwsink from the Faithfull range is recommended.

SCREWSINKS

Screwsinks are used for drilling, countersinking and counter-boring in one operation.

The countersink part is adjustable by means of a hexagon key, to allow for different depths of holes to be drilled. To ensure an accurate fit, we suggest you use the corresponding plug cutter from the Faithfull range.

Each screwsink is supplied with a hexagon key.

HINGE BORING BITS

Specially designed for drilling 'blind' holes when fitting concealed hinges in kitchen, bedroom and bathroom cabinet doors, the cutters are available in 26mm and 35mm sizes. They have a TCT centre point and main cutter featuring a relief angle for reducing drag when drilling, and are suitable for use in all natural woods and man-made materials such as blockboard, melamine faced boards, chipboard and MDF.

These bits should always be used with a stand-mounted drill.

D FAI HBB35	35mm	60mm	8mm	£8.25	£9.69

SAW TOOTH BIT SET

Saw tooth drill bits are used for fast cutting in all types of wood with or across the grain. Titanium coated for longer life, they drill overlapping holes at any angle, and bore clean, true and flat bottomed holes with minimal effort. They are suitable for use in most power drills, and the set is supplied in a wooden case.
