CHISELS, POINTS AND SPADES

All Faithfull steels are manufactured in the UK to the very highest standards using traditional forging skills such as hammer work on chisels and drop stamp forging of cutting blades, coupled with the latest technology in precision machining to ensure that every steel is 'fit for purpose' in this very demanding area of work.

Our range of tools is designed to fit the most commonly used breakers and demolition hammers currently in use, including all 'SDS Max' machines, all 19mm hex Bosch and Ryobi machines, all 21mm hex Kango, all 28mm hex Bosch and Hitachi machines.
