

HAMMERS

By their very nature, the forces and stresses created when using hammers mean that users need to source hammers with care. Faithfull hammers are made to British Standard 876 (1995).

The hammer range featured on pages 87 to 91 is one of the largest in the UK and caters for most trade applications.

BALL PEIN HAMMERS

These hickory handled engineers hammers are precision ground with hardened striking faces to withstand all metalworking tasks.

CLAW HAMMERS

TUBULAR STEEL HAMMERS Tubular steel strikes a good balance between structural strength and production cost.

HICKORY HAMMERS Hickory is the traditional shaft material for hammer handles and is recognised for its ability to absorb impact.

FIBREGLASS HAMMERS Fibreglass is a synthetic material that is stronger than traditional timber.

It is very light in weight and its resistance to moisture is a major characteristic.

MAGNETIC HAMMER Features a magnetic recess in the hammer face for holding nails.

ALL-STEEL The highly polished one-piece construction combines style with quality and safety, and the curved claws are ideal for prying, levering and nail pulling. The narrow shaft enhances weight distribution and balance. The vinyl moulded handle is bonded to the shaft to maximise shock absorption and comfort.
