

## BI-METAL HOLESAWS

These holesaws are manufactured from bi-metal material with hardened teeth made from high speed steel, and a variable tooth pitch for fast smooth cutting. Bi-metal saws offer increased safety as they will not shatter under load.

They are ideal for use on a wide variety of materials including wood, chipboard, plywoods, plasterboard, non-laminated plastics, and non-ferrous metals.

This range is suitable for use in most variable speed power drills.

### General points when using holesaws

- Always make sure the workpiece is securely clamped, and select the correct speed for the diameter of holesaw being used and that of the material being cut.
- Always use the correct size arbor for the saw size selected, and make sure that arbors with drive pins have these fully engaged before use.
- Always use a lubricant when cutting steel and withdraw the holesaw from the cut at regular intervals to prevent clogging in deep holes.
