

### External Building Profiles

#### Galvanised steel construction

External corner profiles provide the answer to fast and accurate bricklaying by removing the need to raise corners first. Brick profiles may be used after three courses of bricks have been laid and allowed to set overnight.

Once the profiles have been attached to the brickwork and set up, they provided an accurate and firm corner post from which a building line may be run.

Building profiles are easy to set up, simple to use and are supplied complete with all the fittings needed to help you lay bricks quickly and accurately. The profiles design also allows easy access to the brickwork for pointing and 'rubbing in' to be completed as work progresses for greater productivity.

- Set Contains:
- 2 x 2metre BUILDING PROFILES
  - 2 x 230mm BOLTS
  - 2 x 350mm BOLTS
  - 2 x 460mm BOLTS
  - 4 x CLAMP BRACKETS
  - 4 x EXTERNAL WING NUTS
  - 2 x LINE HOLDERS
  - 2 x STABILISERS
  - 1 x SETTING DEVICE
