

Wire Scratch Brushes

Popular with both industrial and DIY users, wire scratch brushes are used for removing rust, corrosion, paint and primer and for generally producing clean surfaces.

These brushes have unique curved profiles with a narrow face to make them perfect for accessing those hard-to-reach places. The high density wire fill and the contoured plastic handle allow users to apply a higher pressure than that used with conventional wire brushes.

	WIRE TYPE	HANDLE COLOUR	Ex VAT	Inc VAT
FAIWBHANDSS	Stainless Steel	Blue Handle	£3.84	£4.61
FAIWBHANDS	Steel	Red Handle	£2.38	£2.86
FAIWBHANDB	Brass	Yellow Handle	£5.05	£6.06

Fitted with colour coded handles featuring hanging slots, and available in three different wire types to suit most applications.

Screw Extractor Kit

Manufactured from hardened tool steel and double tempered for extra hardness. Easily removes the most damaged and hard to remove screws and bolts. Works on pozidrive, phillips, flat, hex and star headed screws and bolts. Works on jagged and uneven breaks. Self-centring tip. Removes screws from wood, metal or plastic. Removes screws manufactured from any alloy including soft brass. Removes free-spinning screws.
