

Plumb-Auto

The quick-stabilising 400g steel bob on the plumb-auto provides an accurate plumb line within seconds. By using either the magnetic panel or the retractable pin, it can be secured to steel, timber or plaster surfaces before dispensing a line to the required length. The plumb-auto is ideal for all building and decorating applications, and the magnetic feature is an asset when working on steel fabrications where nails and pins are ineffective.

Bob weight: 400g (14oz)
Line length: 6.7M (22ft)

Steel Plumb Bobs

A plumb bob is used to transfer points from below or above a pre-determined point so that they are in vertical alignment. A plumb bob consists of a weighted piece attached to a long string. To use a plumb bob, mark the spot above the area you are creating a vertical line to, wrap the plumb bob string around a nail or other object and lower the plumb bob until it is very close to the working surface but not touching. When the plumb bob stops swinging, the pointed end of the plumb bob will be exactly in line with the point above. The two points are in perfect vertical alignment.

Weight: 140g (5oz)

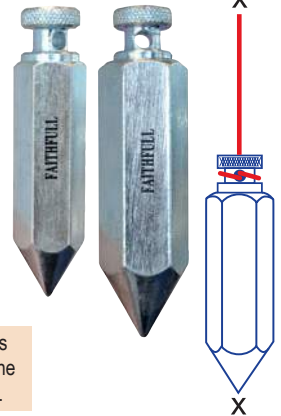

Size: 82 x 20mm
