

### ALL STEEL Shovels and Fork

Made from carbon manganese steel for strength and epoxy coated for rust protection. A tubular shaft is welded to the socket for a strong, smooth join. Solid forged and correctly tempered for strength. The metal shaft is fitted with an MYD hilt and a wooden cross dowel for added comfort.

Solid forged blade is correctly tempered for a long working life.

Heavy-duty solid forged socket and blade for strength and durability.

High quality welds, with no open points. Prevents water causing internal rust.

Wider and deeper hilt to accommodate large and gloved hands.

Riveted and pegged dowel for extra strength.
