

HEAT MATS

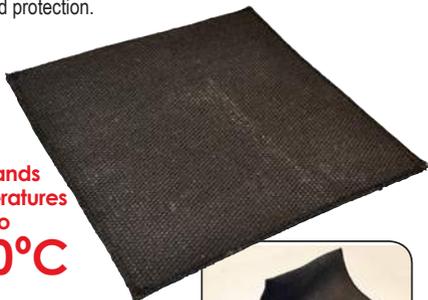

Two high temperature, asbestos free, protective heat mats for plumbing, brazing and soldering applications. Protects the working area from heat damage. Suitable for use with butane and propane gas.

Plumbers Soldering Mat

Ideal for DIY and light trade use including soft soldering and most plumbing applications. The heat mat will provide protection to surfaces against burn marks and heat damage. For best results the flame should not come into direct contact with the surface of the mat for prolonged periods. If the surface of the mat begins to glow it should be moved slightly so that the flame is redirected to a previously unheated area.

Always use the same side to face the flame to keep the reverse side clean against the surface being protected. If an area is to be exposed to heat for extended periods we recommended the use of two heat mats, layered for improved protection.

Withstands temperatures of up to **550°C**

Size:
250mm x 250mm
with stitched edging

£5.14 Ex VAT £6.17 Inc VAT

Plumbers Soldering Pad

For professional soft soldering, brazing and most other plumbing applications. This heavy-duty heat pad will provide protection to surfaces against burn marks and heat damage.

For best results always ensure the white side of the pad is facing towards the heat source and avoid direct flame contact with the surface of the pad for prolonged periods. If the surface of the pad begins to glow it should be moved slightly so that the flame is redirected to a previously unheated area. The pad also features an easy wipe clean back.

Withstands temperatures of up to **1200°C**

Size:
190mm x 300mm
with reinforced edging

Silicone Tape

Manufactured from a special high quality silicone rubber compound which adheres to itself when wrapped under tension, forming a non-conductive, air and water tight seal. Silicone tape can safely be used in temperatures of up to 260°C and remains flexible down to -50°C. The tape can provide insulation of up to 8,000 volts per unstretched layer or (400 volts/mil) and has a tensile strength of 600psi.

During application silicone tape will stretch by up to 300% and will conform to irregular shapes. This tape contains no adhesive and leaves no residue when removed and resists UV light and weathering. Ideal for carrying out emergency repairs. WRAS approved product.
