Mains Testers

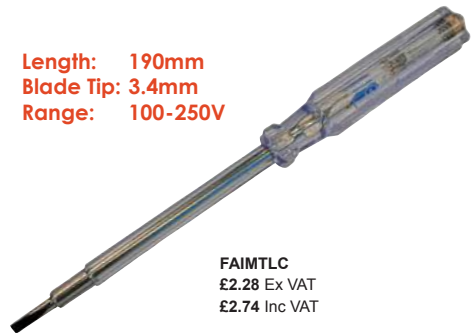

A neon indicator in a clear plastic handle with a sleeved and insulated blade. The indicator will illuminate when the point of the tester is touched on a live voltage source of between 220-250 volts and an earthing contact is made with the metal stud on the top of the handle.

- Length:** 140mm
- Blade Tip:** 2.9mm
- Range:** 100-250V

Mains Tester

Made from unbreakable and shatterproof ABS. The handle, pocket clip and blade are insulated for maximum safety. Made to VDE specification 0680- Part 6 - 4.77.

To test the circuit place the mains tester end on the electric contact and press your thumb against the metal contact next to the neon viewing window, if the contact is live the bulb will light.

	SIZE	LENGTH	Ex VAT	Inc VAT
FAIMTS	Small	57mm	£2.11	£2.53
FAIMTL	Large	127mm	£2.59	£3.11

SAFETY NOTE

Always read the instructions supplied with any mains or multi-tester. Never use a mains tester or multi-tester until you are fully conversant with its use and applications. Never work on live equipment and if in any doubt, always contact a qualified electrician. Check that the neon bulb is in order by using the tester first on a known live circuit. Never touch the un-insulated part of the blade when testing.

Multi-function Mains Tester

The multi-tester is more than just a conventional voltage tester.

The built in battery powered sensor allows the multi-tester to perform a number of different functions without the need to dismantle a suspected faulty item or have any contact with live parts. The multi-tester is fully insulated and is supplied complete with full operating instructions and will perform the following tests: continuity, bulbs, fuses, short circuits, cable tracking, mains sockets and microwave oven leakage.
