## Faithfull website

To keep up to date with the latest prices and new product releases visit the Faithfull website. The Faithfull website features an online catalogue along with a product support section that includes downloads for missing or lost instructions. Links to each individual product provide addition information along with the facilities to help you find a local stockist or place an order with an online supplier.

## Easy to follow guidelines

Take care when working with all tools; they can cause injury to you and others. On average, more than 250,000 people are injured in DIY accidents in the UK every year. There is always a 'right' way and a 'wrong' way to use tools. Obtain the correct tool for the job in hand and use it only for the purpose intended.

## Always read the instructions

Never assume that you know all there is to know about tools, and always study the manufacturer's information and advice. Read the instructions before starting a job involving the use of tools, especially if the tool is unfamiliar to you. If in any doubt, seek professional advice.

## Think before starting the job

Prepare a checklist of what tools and which protective safety equipment you will need.

## Choose the correct tool

Use the correct tool and don't compromise with an inappropriate alternative.

## Ensure a comfortable working position

Before you start work, consider what equipment and access you will need to ensure the safe use of your tools. Particular attention must be paid when working in awkward or elevated places.
