

## Aluminium Rivets

A selection of pop or blind rivets manufactured from quality aluminium with a steel pulling mandrel. These rivets are suitable for use with most hand riveters and they can be installed quickly and easily from one side of the work piece. After installation, the dome head has twice the diameter of the rivet body, thus providing sufficient bearing surface to retain all materials except those with extremely soft or brittle characteristics. RoHS compliant. Quick application and economic cost.

### Selection of Rivet Size

It is necessary to drill a hole in the material before riveting. Matching the hole to the rivet size is very important. For example, where the outer diameter of the rivet is 3.2mm the hole diameter should be between 3.3 and 3.4mm. The rivet should be 4mm longer than the object to be riveted is thick.

### DRILL SIZE GUIDE

Rivet Diameter	3.2mm	4.0mm	4.8mm
Drill Size	3.3mm	4.1mm	4.9mm
