

## HSS WOOD TURNING CHISELS

A range of the most popular wood turning chisels for use on wood turning lathes. All chisels feature walnut handles, brass ferrules and have fully polished blades with deep seated tangs.

Manufactured from High-Speed Steel, these chisels perform well in both hard and soft woods. They maintain a sharp cutting edge much longer than their carbon steel equivalents, requiring less time being re-sharpened.

Chisels have an overall length of 410mm and are fitted with a full sized 230mm contoured walnut handle, providing a firm grip for precise handling and a brass ferrule for a professional finish.

### Spindle Gouge

For use between centres on parallel grain, for forming beads, coves and profile work on vases, cups and shaped work. Scoops and cuts deep "U" grooves when spindle turning.

#### 8mm Spindle Gouge

### Roughing Out

For removing large amounts of timber quickly. Can also be used to plane the surface of spindle blanks and shape gentle curves.

**Skew** For planing a smooth surface on the outside of spindles and cutting v-grooves and forming beads.

**Round Nose** For hollowing out and finishing concave surfaces such as inside a bowl.

### Parting Tool

Designed for parting, or cutting off a spindle work piece.

### Diamond Point

For incised line decoration.

## Turning Chisels

A set of eight HSS wood turning chisels containing one each of the above chisels in a wooden presentation case.
